

## SOLVE & EVOLVE

### Healthcare Challenge 3 of 6:

### Consolidation: The IM Challenges of M&A

Mergers and acquisitions have become the new normal in healthcare. When you acquire a company – for better or worse – you also acquire its information. As a result, you may end up grappling with two entirely different approaches to information management. In order to mitigate risk and enable compliance, it is important to get your arms around what you have, where it is stored and how it is being managed.

#### STORE

Centralize, index and classify records to get your arms around what you have. From critical business information to pathology specimens, your information is kept offsite or **in the cloud**.

## SOLVE

HOW DO YOU GET YOUR ARMS AROUND HEALTHCARE RECORDS?

#### DESTROY

Mitigate risk and prevent a breach by disposing of records, data and IT assets housing sensitive information in a **secure reliable, cost-efficient way**.

#### COMPLY

Create an **enterprise retention schedule**. Document policies and stand up a committee to address the management and quality information across the enterprise.

## EVOLVE

Click a link to dive deeper.

#### TRANSFORM

Reduce paper and improve data quality by digitizing records and creating an **Enterprise Master Patient Index**.
